## Patent FTO Search for the Generic compound

wherein

R<sup>1</sup> is C<sub>1</sub>-C<sub>4</sub>alkyl or C<sub>1</sub>-C<sub>4</sub>haloalkyl;

R<sup>2</sup> is an optionally substituted aryl or heteroaryl;

R<sup>3</sup> is halogen;

R<sup>4</sup> is hydrogen, halogen, C<sub>1</sub>-C<sub>4</sub> alkyl, C<sub>1</sub>-C<sub>4</sub> haloalkyl, cyano or OR<sup>6</sup>;

R<sup>5</sup> is hydrogen, halogen, C<sub>1</sub>-C<sub>4</sub> alkyl, C<sub>1</sub>-C<sub>4</sub> haloalkyl, cyano or OR<sup>6</sup>;

R<sup>6</sup> is hydrogen, C<sub>1</sub>-C<sub>6</sub> alkyl, C<sub>3</sub>-C<sub>7</sub> cycloalkyl, C<sub>3</sub>-C<sub>10</sub> alkylcycloalkyl, C<sub>1</sub>-C<sub>6</sub> haloalkyl, C<sub>2</sub>-C<sub>6</sub> alkenyl,

C<sub>6</sub> haloalkenyl, C<sub>3</sub>-C<sub>7</sub> cycloalkenyl, C<sub>2</sub>-C<sub>6</sub> alkynyl, C<sub>2</sub>-C<sub>6</sub> haloalkynyl, C<sub>2</sub>-C<sub>6</sub> alkyloxyalkyl;

R<sup>7</sup> is halogen or OR<sup>6</sup>;

X is N or C-R<sup>4</sup>;

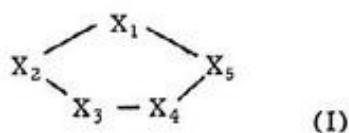

or an agrochemically usable salt form thereof.

## Exact match structures

### Structure-1 (12(doc1))

DE4124942

one of the gps. X<sub>1</sub> - X<sub>5</sub> = A-B-C-N<, A-B-C-CH< or  
A-B-C-C<;

a second gp. = F'-E-D-N<,

F'-E-D-CH< or F'-C-D-C<;

a third gp. = S, sulphenyl, sulphinyl, R<sub>1</sub>N<, R<sub>2</sub>C<,

(R<sub>2</sub>)<sub>2</sub>C< or N;

a fourth gp. = O, S, N, SO<sub>2</sub> or R<sub>2</sub>C<, or may also be  
C=O when this gp. is not between 2 N atoms;

a fifth = N, R<sub>2</sub>C< or (R<sub>2</sub>)<sub>2</sub>C<; or

- X<sub>1</sub> = A-B-C(sp<sub>2</sub> carbon), X<sub>2</sub> = F-C-D-C(sp<sub>2</sub> carbon), X<sub>3</sub> = R<sub>1</sub>-N<, X<sub>4</sub> = N, X<sub>5</sub> = R<sub>2</sub>-C(sp<sub>2</sub> carbon)

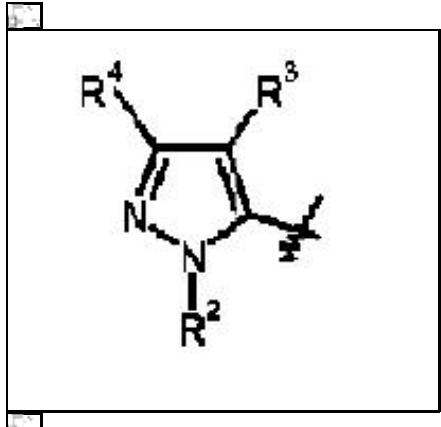

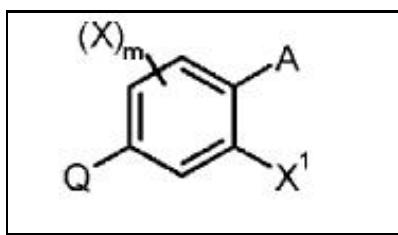

1. X<sub>1</sub>: A = H, B = bond, C = (b) under B which is halo substituted phenylene which completely matches with 4<sup>th</sup> position substituent of the generic compound

2. X<sub>2</sub>: D = (b) under B is a phenylene(implies a substituted aryl) and F-C- is a substituent on D. It is clear that this will match with R<sup>2</sup> (substituent aryl) at the 5<sup>th</sup> position of pyrazole of the generic structure

3.  $X_3$ :  $R_1 = Q(\text{alkyl})$  which matches with  $R^1(\text{alkyl})$  at the 1<sup>st</sup> position of pyrazole of the generic structure  
 4.  $X_4$ :  $N$  which matches with the 2<sup>nd</sup> position of pyrazole of the generic compound  
 5.  $X_5$ :  $R_2 = \text{Cl}, \text{Br}$  which matches with  $R^3(\text{halogen})$  at the 3<sup>rd</sup> position of pyrazole of the generic structure

## Structure-2 (9(doc2))

WO2007081019

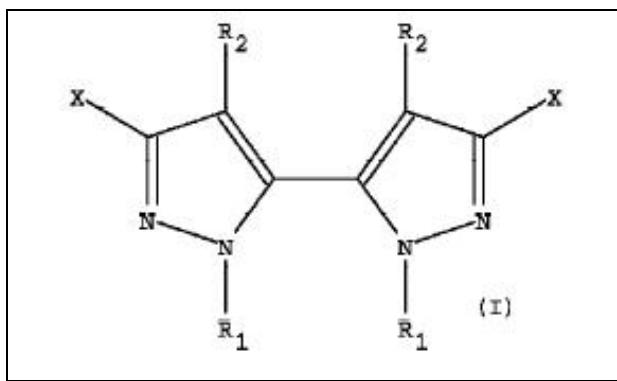

In the above phenyl ring Q is pyrazole.

- $R^2 = \text{alkyl}$  which matches with  $R^1(\text{alkyl})$  at 1<sup>st</sup> position of pyrazole of the generic compound.
- $R^4$  is halogen which matches with  $R^3(\text{halogen})$  at 3<sup>rd</sup> position of pyrazole of the generic compound
- 4<sup>th</sup> position of above pyrazole is trihalo substituted aryl which matches with substituent at 4<sup>th</sup> position of pyrazole of generic compound .
- 5<sup>th</sup> position of pyrazole ring is above substituted aryl which matches with  $R^2(\text{substituted aryl})$  at the 5<sup>th</sup> position of pyrazole of generic compound.

## Structure-3 (125(doc2))

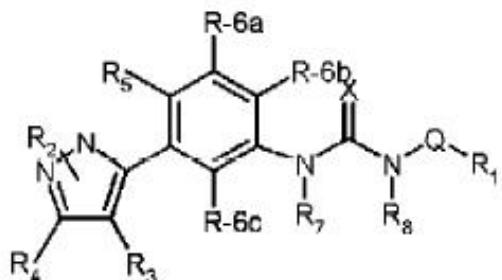

JP11130754

Consider left side ring the pyrazole ring

- $R_1$  is 1-4C alkyl which is matching with substituent  $R^1$ (first position) of the generic structure
- X is Cl so it is matching with the substituent  $R^3$  (second position) of the generic structure
- $R_2$  is phenyl substituted by halo, 1-4C alkyl, cyano which is matching with the fourth position of the generic structure
- In the fifth position pyrazole(heteroaryl) is there?which is matching with the substituent  $R^2$ (fifth position) of the generic structure.

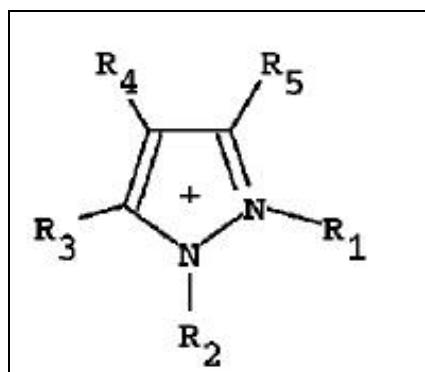

## Structure-4 (109(doc2))

- R<sub>2</sub> is 1-6C alkyl which is matching with substituent R<sup>1</sup>(first position) of the generic structure
- R<sub>4</sub> is halo matching with the substituent R<sup>3</sup> (second position) of the generic structure
- R<sub>3</sub> is heteroaryl or phenyl substituted by 1-8C alkyl, halo, CN, 1-6C alkoxy which is matching with the fourth position of the generic structure
- In fifth position substituted aryl ring there, which is matching with the substituent R<sup>2</sup>(fifth position) of the generic structure.

### Structure-5 (128(doc2))

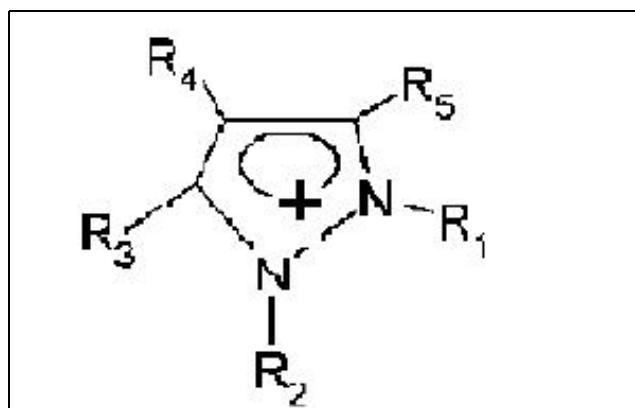

US5827602

- R<sub>1</sub>-R<sub>6</sub>=H, F, 1-4C alkyl, phenyl
- R<sub>2</sub>= 1-4C alkyl which matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of the generic structure
- R<sub>5</sub>= F which matches with R<sup>3</sup>(halo) at 1<sup>st</sup> position of pyrazole of the generic structure
- R<sub>4</sub>= phenyl substituted with an electron with drawing group matches with substituent at 4<sup>th</sup> position of pyrazole of generic structure
- R<sub>3</sub>= substituted aryl which matches with R<sup>2</sup>(substituted aryl) at 5<sup>th</sup> position of pyrazole of the generic structure

### Structure-6 (19(doc2))

US 2007100181

R<sub>1</sub>-R<sub>2</sub>= H, -C<sub>2</sub>H<sub>5</sub> which matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of generic structure

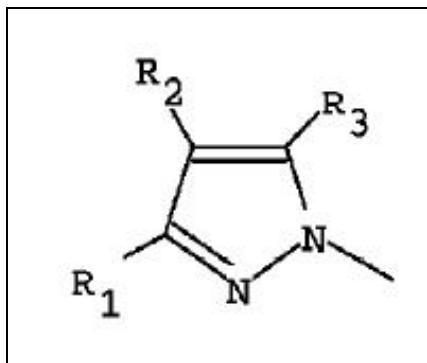

R<sub>3</sub>= halogen which matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of generic structure

R<sub>4</sub>= 6-25C heteroaryl having 1-3 heteroatoms(N)(could be pyridine) with substituents as halo, OH and alkyl which completely resembles substituent at 4<sup>th</sup> position of pyrazole of the generic structure

R<sub>5</sub>= 6-25C heteroaryl having 1-3 heteroatoms(N)(could be pyridine) with substituents which resembles R<sup>2</sup>(substituted aryl) at 5<sup>th</sup> position of pyrazole of generic structure

## Structure-7 (88(doc2))

DE19503827

Q-R<sub>4</sub>

Q= above structure

R<sub>4</sub>= CR<sub>5</sub>R<sub>6</sub>R<sub>7</sub> where R<sub>5</sub>= 1-4C alkyl, R<sub>6</sub>= H so no need of R<sub>7</sub>

R<sub>4</sub> matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of generic structure

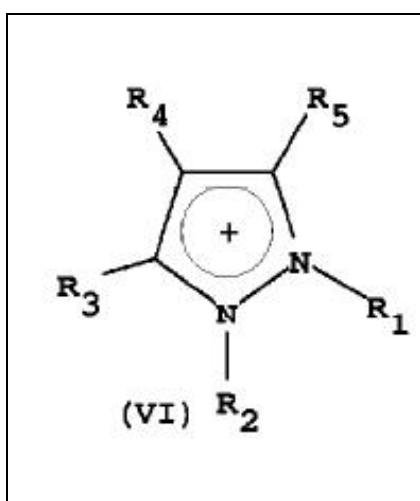

R<sub>1</sub>= halo matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of generic structure

R<sub>2</sub>= alkylaryl substituted by halo matches with substituent at 4<sup>th</sup> position of pyrazole of generic structures

R<sub>3</sub>= substituted aryl which resembles R<sup>2</sup>(substituted aryl) at 5<sup>th</sup> position of pyrazole of generic structure

## Structure-8 (86(doc2))

WO9702252

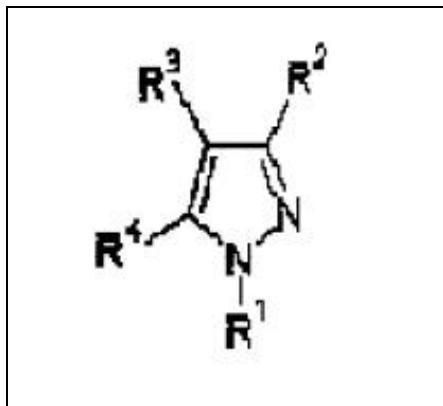

R<sub>1</sub>-R<sub>2</sub>= 1-4C alkyl, H matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of generic structure

R<sub>3</sub>= halogen matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of generic structure

R<sub>4</sub>= phenyl substituted with electron withdrawing group(halogens) matches with substituent at 4<sup>th</sup> position of pyrazole of generic structures

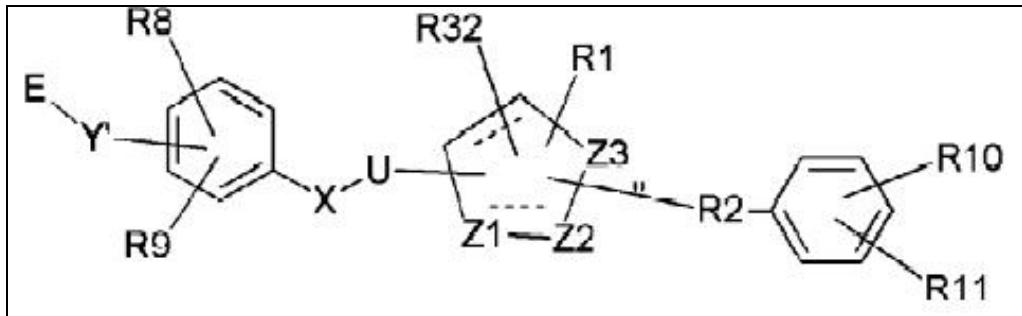

R<sub>5</sub>= substituted aryl which resembles R<sup>2</sup>(substituted aryl) at 5<sup>th</sup> position of pyrazole of generic structure

## Structure-9 (41(doc2))

- R<sup>1</sup>= lower alkyl which matches with R1(alkyl) at 1<sup>st</sup> position of pyrazole of the generic structure
- R<sup>2</sup>= halogen which matches with R3(halogen) at 3<sup>rd</sup> position of pyrazole of the generic structure
- R<sup>3</sup>= methoxyphenyl which indicates substituent at 4<sup>th</sup> position of generic structure
- R<sup>4</sup>= methoxy phenyl which matches with R<sup>2</sup>(substituted aryl)at 5<sup>th</sup> position of pyrazole of generic structure

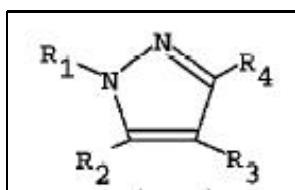

### Structure-10 (61(doc1))

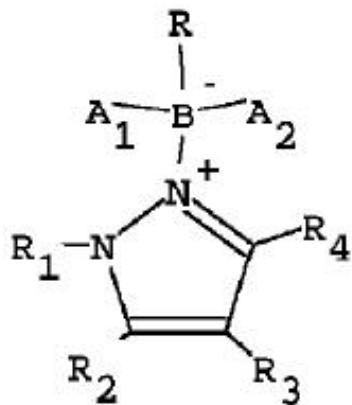

- Z1= C, Z2= N, Z3= N Which indicates pyrazole ring.
- R1= Alkyl which matches with R<sup>1</sup>(alkyl) at the 1<sup>st</sup> position of pyrazole of the generic compound
- R32= halo which matches with R<sup>3</sup>(halogen) at the 3<sup>rd</sup> position of pyrazole of the generic compound
- R2(0-8Calkyl) so it may be ?0?C alkyl implies it is simply a bond, bonded to a substituted phenyl ring which matches with R<sup>2</sup>(substituted aryl) at the 5<sup>th</sup> position of pyrazole of the generic structure
- U is an aliphatic linker(linker means a bond, aliphatic means saturated. So aliphatic linker means saturated bond which implies a single bond) so it is a bond and X is a single bond linked to substituted aryl with halogens and cycloalkyl as substituents which matches with 4<sup>th</sup> position of pyrazole of the generic compound.

### Exact match structures but mentioned as optionally substituted at 4th position of pyrazole of generic structure

#### Structure-1 (84(doc2))

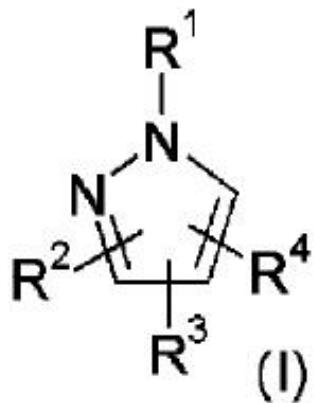

- $R_1-R_4$  = 1-8C alkyl, haloalkyl, halo, phenyl(optionally substituted by halo, 1-4C alkyl, haloalkyl, alkoxy,)
- $R_1$  = 1-8C alkyl which matches with  $R^1$ (1-4C alkyl) at 1<sup>st</sup> position of pyrazole of generic structure
- $R_4$  = halo which matches with  $R^3$ (halogen) at 3<sup>rd</sup> position of pyrazole of generic structure
- $R_3$  = phenyl(optionally substituted by halo, alkoxy) which matches with substituent at 4<sup>th</sup> position of pyrazole of the generic structure
- $R_2$  = phenyl(optionally substituted) which matches with  $R^2$ (substituted aryl) at 5<sup>th</sup> position of pyrazole of the generic structure

### Structure-2 (74(doc2))

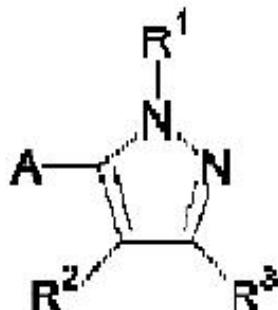

WO0130154

- $R^1$  = (1-6C)alkyl which matches with  $R^1$ (1-4C alkyl) at 1<sup>st</sup> position of pyrazole of the generic compound
- $R^2$  = halo which matches with  $R^3$ (halogen) at 3<sup>rd</sup> position of pyrazole of the generic compound
- $R^3$  = phenyl optionally substituted with halo, 1-6C alkyl, 1-6C alkoxy which matches with substituent at 4<sup>th</sup> position of pyrazole of the generic compound
- $R^4$  = heterocycl containing 1 or 2N and optionally substituted which matches with  $R^2$ (optionally substituted heteroaryl) at 5<sup>th</sup> position of the generic compound

### Structure-3 (39(doc2))

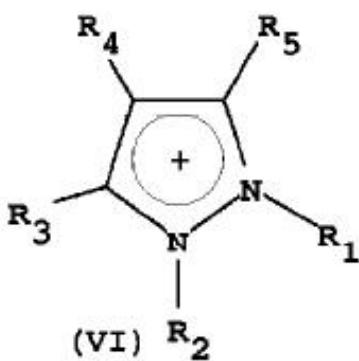

JP2005272306

- A= substituted heteroaryl which matches with R<sup>2</sup>(substituted aryl) at 5<sup>th</sup> position of pyrazole of the generic structure
- R<sup>1</sup>= alkyl which matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of generic structure
- R<sup>3</sup>= halogen which matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of generic structure
- R<sup>2</sup>= phenyl optionally substituted by Y(1-6C alkyl), 1-6C alkoxy and matches with substituent at 4<sup>th</sup> position of pyrazole of generic structure

### Structure-4 (25(doc2))

US2007066822

R<sup>1</sup>-R<sup>2</sup>= H, -CH<sub>3</sub>, -C<sub>2</sub>H<sub>5</sub> which matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of generic structure

R<sup>3</sup>= halogen which matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of generic structure

R<sup>4</sup>= 6-25C optionally substituted heteroaryl which resembles substituent at 4<sup>th</sup> position of pyrazole of the generic structure

R<sup>5</sup>= optionally substituted 6-25C heteroaryl which resembles R<sup>2</sup>(substituted aryl) at 5<sup>th</sup> position of pyrazole of generic structure

### Structure-5 (23(doc2))

US2007066854

Z<sup>+</sup>= pyrazolium (substituted at 1-5 R1-R5)

R<sub>1</sub>= -CH<sub>3</sub>, -C<sub>2</sub>H<sub>5</sub> which matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of generic structure

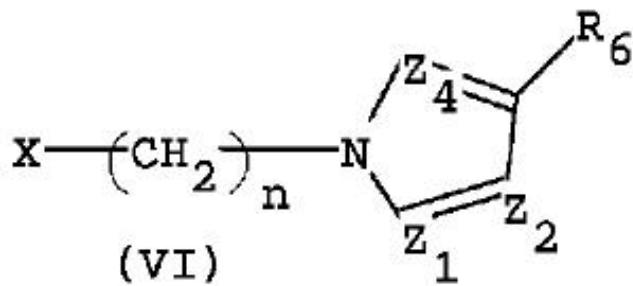

R<sub>3</sub>= halogen which matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of generic structure

R<sub>4</sub>= 6-25C aryl optionally substituted by C<sub>2</sub>H<sub>5</sub>, OH which resembles substituent at 4<sup>th</sup> position of pyrazole of the generic structure

R<sub>5</sub>= optionally substituted 6-25C heteroaryl which resembles R<sup>2</sup>(substituted aryl) at 5<sup>th</sup> position of pyrazole of generic structure

### Structure-6 (90(doc2))

FR2723091

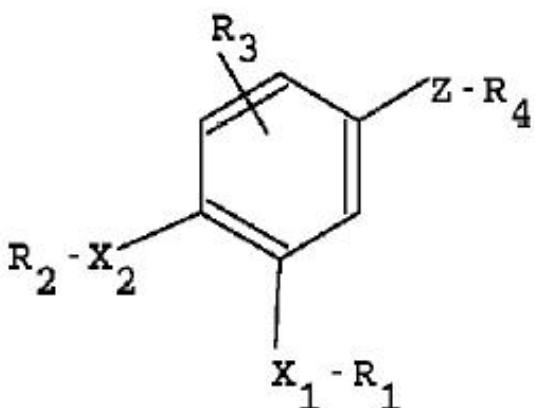

$\text{X}$ = halo,  $n=2-4$

$\text{Z}_1=\text{N}$ ,  $\text{Z}_2=\text{CR}_5$ ,  $\text{Z}_4=\text{CR}_7$

$\text{R}_4\text{-R}_7$ = alkyl matches with  $\text{R}^1$ (alkyl) at 1<sup>st</sup> position of pyrazole of generic structure; halogen matches with  $\text{R}^3$ (halogen) at 3<sup>rd</sup> position of pyrazole of generic structure; optionally substituted aryl which resembles  $\text{R}^2$ (substituted aryl) at 5<sup>th</sup> position of pyrazole of generic structure and matches with substituent at 4<sup>th</sup> position of pyrazole of generic structures

### Structure-7 (92(doc2))

WO9600218

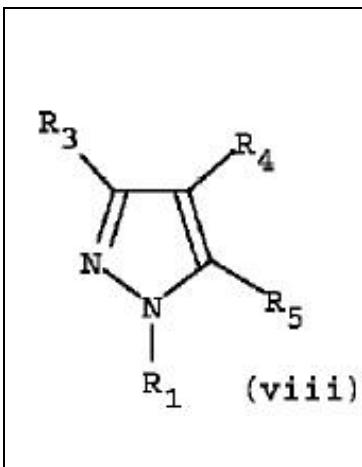

$\text{Z}$ = a bond,

$\text{R}_4$  is a pyrazole with substituents as 1-4C alkyl matches with  $\text{R}^1$ (alkyl) at 1<sup>st</sup> position of pyrazole of generic structure; halo matches with  $\text{R}^3$ (halogen) at 3<sup>rd</sup> position of pyrazole of generic structure; optionally substituted aryl which resembles  $\text{R}^2$ (substituted aryl) at 5<sup>th</sup> position of pyrazole of generic structure and matches with substituent at 4<sup>th</sup> position of pyrazole of generic structures

### Structure-8 (95(doc2))

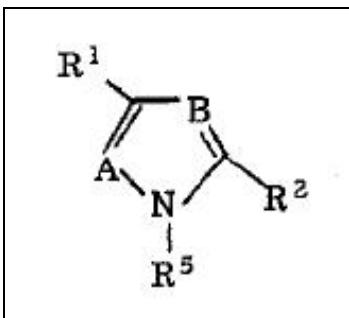

WO9524403

- R<sub>1</sub>= alkyl which matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of the generic structure
- R<sub>3</sub>= halo which matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of the generic structure
- R<sub>4</sub>= heteroaryl optionally substituted indicating substituent at 4<sup>th</sup> position of pyrazole of the generic structure
- R<sub>5</sub>= optionally substituted heteroaryl which matches with R<sup>2</sup>(optionally substituted heteroaryl) at 5<sup>th</sup> position of pyrazole of the generic structure

## Structure-9 (98(doc2))

JP6345728

- A= N, B= CR<sup>4</sup>
- R<sup>5</sup>= 1-6C alkyl which matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of the generic structure
- R<sup>3</sup>= halogen which matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of the generic structure
- R<sup>4</sup>= phenyl(optionally substituted by halo, CN, alkoxy)indicating substituent at 4<sup>th</sup> position of pyrazole of the generic structure
- R<sup>2</sup>= optionally substituted phenyl which matches with R<sup>2</sup>(optionally substituted aryl) at 5<sup>th</sup> position of pyrazole of the generic structure

## Structure-10 (34(doc2))

WO2006084262

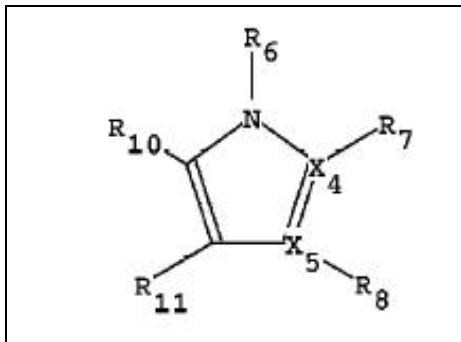

It is pyrazolium with substituents

R<sub>1</sub>-R<sub>5</sub>= halogen matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of generic structure; -C<sub>2</sub>H<sub>5</sub> matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of generic structure; 6-20C substituted aryl with substituents as halogen, OH which resembles substituent at 4<sup>th</sup> position of pyrazole of the generic structure; R<sup>5</sup>= optionally substituted 6-20C heteroaryl which resembles R<sup>2</sup>(substituted aryl) at 5<sup>th</sup> position of pyrazole of generic structure

## Relevant structures with missing substituents

### Structure-1

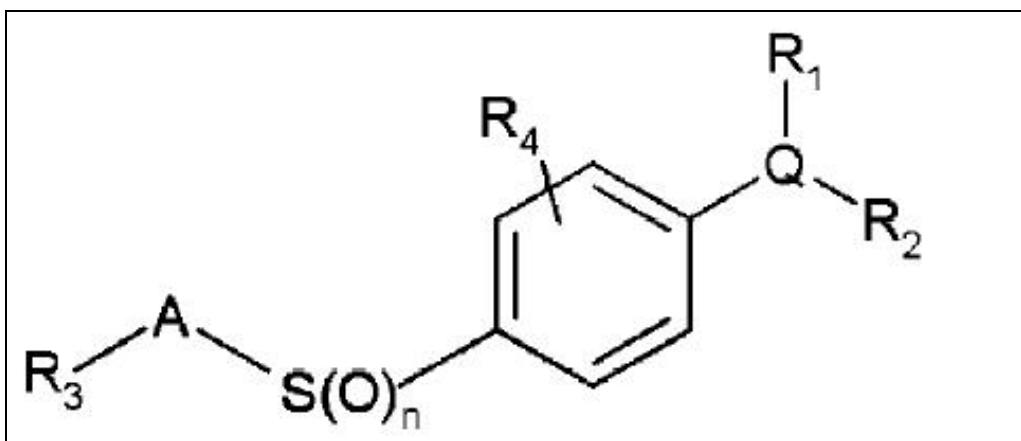

JP09204932

- R<sub>6</sub> is 1-3C alkyl which is matching with substituent R<sup>1</sup>(first position) of the generic structure
- R<sub>7</sub> doesn't exist.. so it is matching with the second position of the generic structure.
- R<sub>8</sub> is halogen so it is matching with the substituent R<sup>3</sup> (second position) of the generic structure
- R<sub>11</sub> is phenyl??? (substituents are missing)??? which is matching with the fourth position of the generic structure
- R<sub>10</sub> is phenyl which is matching with the substituent R<sup>2</sup>(fifth position) of the generic structure.

## Structure-2

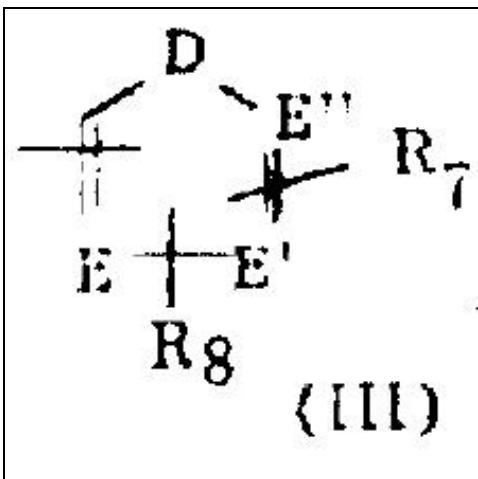

WO0018741

- Q= pyrazolyl
- In the above structure the substituted aryl bonded to Q(pyrazolyl) matches with R<sup>2</sup>(substituted aryl) at 5<sup>th</sup> position of pyrazole of the generic structure
- R<sub>1</sub>= haloalkyl which matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of the generic structure
- R<sub>2</sub>= aryl optionally substituted with halo, lower alkoxy, CN which matches with substituent at 4<sup>th</sup> position of pyrazole of the generic structure.
- But ???R<sup>3</sup>(halogen) of pyrazole of generic structure is missing??? in the above structure

## Structure-3

EP335381

D= NR<sub>12</sub> , E??= N, E?= CH, E= CH

R<sub>12</sub>= alkyl matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of generic structure

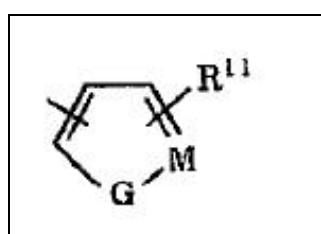

R<sub>7</sub>= halo matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of generic structure

R<sub>8</sub>= substituted benzene ring matches with substituent at 4<sup>th</sup> position (but missing substituents) of pyrazole of generic structures

Above pyrazole ring is attached to a substituted aryl matches with R<sup>2</sup>(substituted aryl) at 5<sup>th</sup> position of pyrazole of generic structure

#### Structure-4

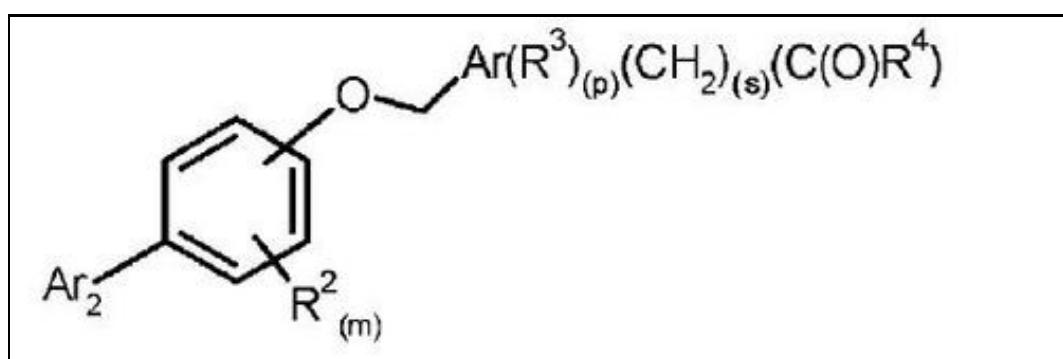

US5296484

- G= NR<sup>20</sup>, M= N
- R<sup>11</sup>= halo, 1-4C alkyl, phenyl
- This structure has substituted aryl at 5<sup>th</sup> position of pyrazole of the generic structure
- At 4<sup>th</sup> position of pyrazole i.e., aryl has no substituents compared to generic structure
- One more substituent is missing on the pyrazole ring

#### Structure-5

US2006122256

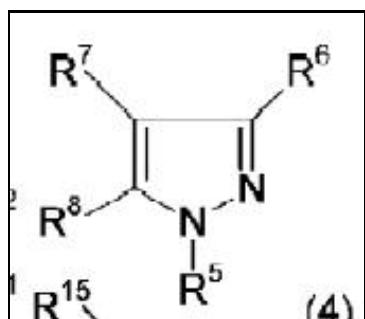

- AR<sup>2</sup>= pyrazol-4-yl optionally substituted by Q(halo, lower alkyl, phenyl)
- Q substituted on AR<sup>2</sup>(pyrazole) indicates R<sup>3</sup>, R<sup>1</sup> and R<sup>5</sup> of pyrazole of the generic structure

- At 4<sup>th</sup> substituent of pyrazole one substituent is missing and one substituent is varying

## Structure-6

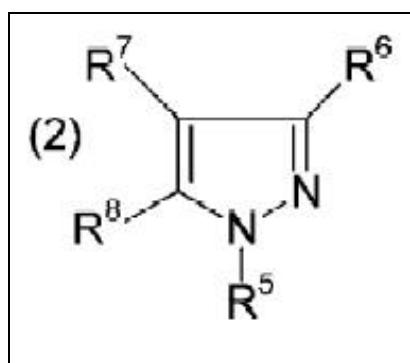

JP2004317641

- R<sup>5</sup>= alkyl which matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of the generic structure
- R<sup>6</sup>= halogen which matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of the generic structure
- R<sup>7</sup>= phenyl with no substituents. It represents substituent at 4<sup>th</sup> position of pyrazole of generic structure with substituents missing
- R<sup>8</sup>= phenyl which matches with R<sup>2</sup>(aryl) at 5<sup>th</sup> position of pyrazole of generic structure

## Structure-7

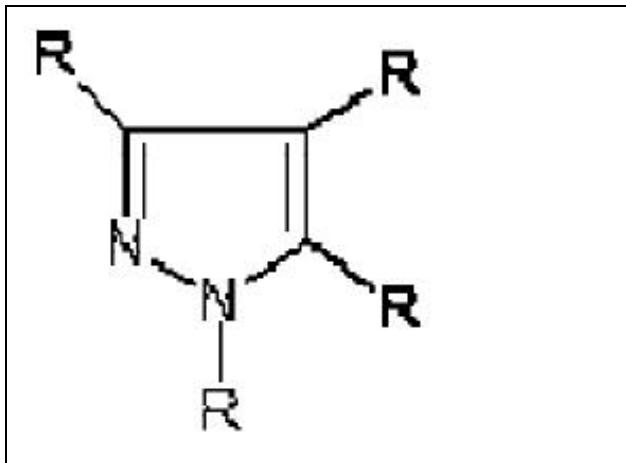

JP2004317640

- R<sup>5</sup>= alkyl which matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of the generic structure
- R<sup>6</sup>= halogen which matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of the generic structure
- R<sup>7</sup>= phenyl with no substituents. It represents substituent at 4<sup>th</sup> position of pyrazole of generic structure with substituents missing
- R<sup>8</sup>= phenyl which matches with R<sup>2</sup>(aryl) at 5<sup>th</sup> position of pyrazole of generic structure

## Structure-8

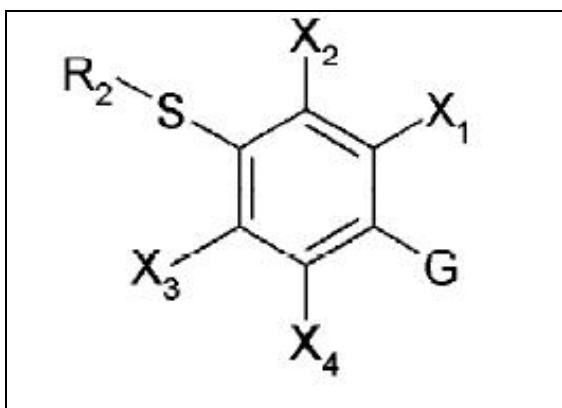

US2005135045

- R= 1-4C alkyl, halogen , phenyl
- R= alkyl which matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of the generic structure
- R= halogen which matches with R<sup>3</sup>(halogen)at 3<sup>rd</sup> position of pyrazole of the generic structure
- R= phenyl with no substituents. It represents substituent at 4<sup>th</sup> position of pyrazole of generic structure with substituents missing
- R= phenyl which matches with R<sup>2</sup>(aryl) at 5<sup>th</sup> position of pyrazole of generic structure

### Structure-9

WO2006124776

R<sup>1</sup>= H, R<sup>2</sup>= halogen, R<sup>3</sup>= pyrazole with substituents, R<sup>5</sup>= H, R<sup>6</sup>= H

R<sup>3</sup> is a pyrazole ring with substituents as:

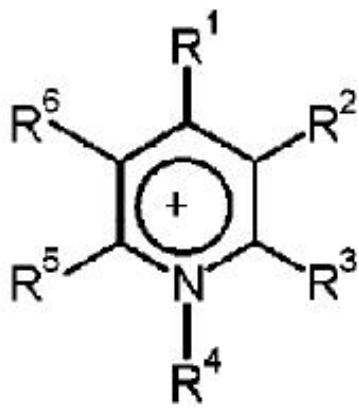

-CH<sub>3</sub> matches with R<sup>1</sup>(alkyl) of pyrazole of the generic structure

Above ring matches with substituent at 4<sup>th</sup> position of pyrazole of the generic structure

R<sup>3</sup> and R<sup>2</sup> of pyrazole of generic structure are missing

### Structure-10

WO2007038363

R<sup>1</sup>= H, R<sup>2</sup>= halogen, R<sup>3</sup>= pyrazole with substituents, R<sup>5</sup>= H, R<sup>6</sup>= H

R<sup>3</sup> is defined as 3-25C substituted heteroaryl having 1-3 heteroatoms of N(so can be pyrazole) in which the substituents are -CH<sub>3</sub>, halogen:

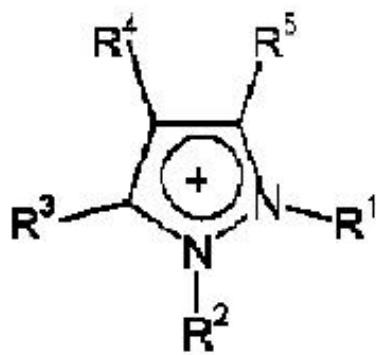

-CH<sub>3</sub> matches with R<sup>1</sup>(alkyl) of pyrazole of the generic structure and halogen matches with R<sup>3</sup>(halogen) of pyrazole of the generic structure

Above ring matches with substituent at 4<sup>th</sup> position of pyrazole of the generic structure

R<sup>2</sup>(substituted aryl) of pyrazole of generic structure missing

## Structure-11

US2007100184

R<sub>1</sub>= H

R<sub>2</sub>= -C<sub>2</sub>H<sub>5</sub> which matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of generic structure

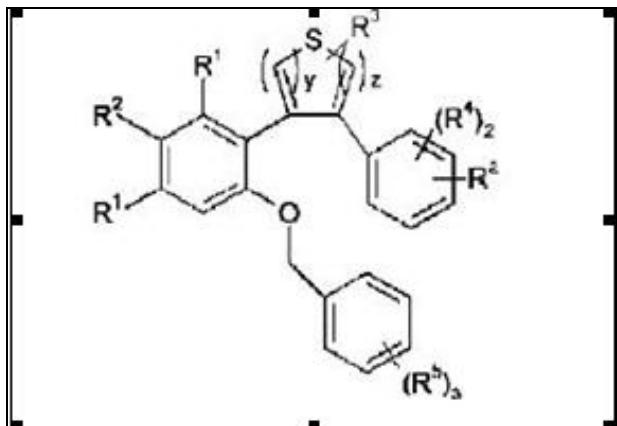

R<sub>3</sub>= halogen which matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of generic structure

R<sub>4</sub>= optionally substituted 6-25C heteroaryl with 1-3 of O, N, S or with 1-3 of CH<sub>3</sub>, C<sub>2</sub>H<sub>5</sub>, 3-25, preferably 3-20C straight, branched or cyclic alkane or alkene optionally substituted with halogens which resembles substituent at 4<sup>th</sup> position of pyrazole of the generic structure but R<sup>7</sup> of pyrazole of generic structure is missing

R<sub>5</sub>= optionally substituted 6-25C heteroaryl which resembles R<sup>2</sup>(substituted aryl) at 5<sup>th</sup> position of pyrazole of generic structure

## Structure-12

US2005020646

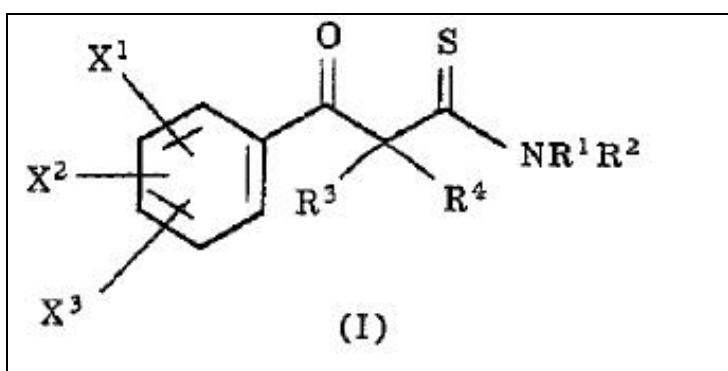

R<sup>a</sup>= pyrazolyl optionally substituted with 1-3 substituents of R<sup>11</sup> or 1-4C alkyl

R<sup>11</sup> is defined as halo matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of generic structure; pyridyl which resembles R<sup>2</sup>(substituted aryl) at 5<sup>th</sup> position of pyrazole of generic structure; pyridyl matches with substituent at 4<sup>th</sup> position of pyrazole of generic structures but R<sup>7</sup> of generic structure is missing

### Structure-13

EP548680

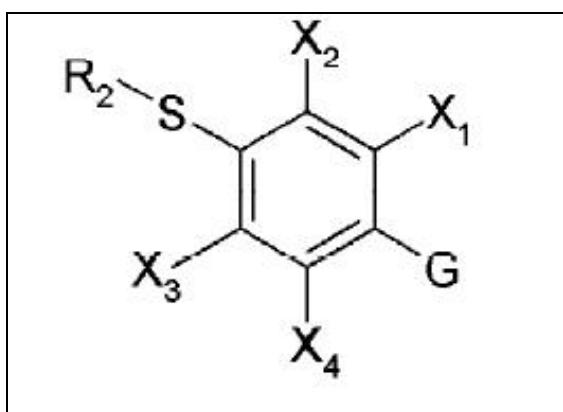

X<sup>1</sup>= het

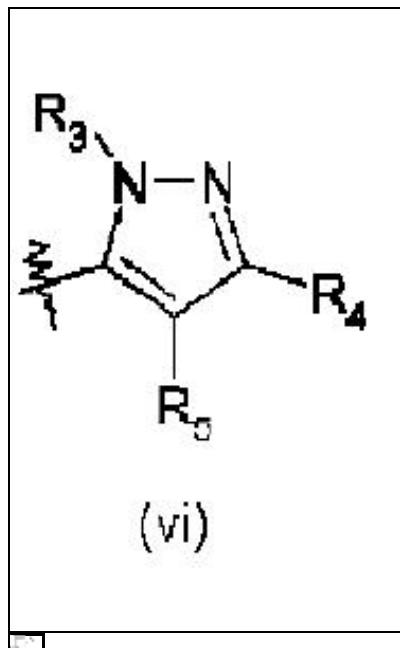

Het = pyrazolyl with substituents alkyl matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of generic structure; halo matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of generic structure; phenyl matches with substituent at 4<sup>th</sup> position (but missing substituents) of pyrazole of generic structures

Above aryl ring is a substituent on X<sup>1</sup> which resembles R<sup>2</sup>(substituted aryl) at 5<sup>th</sup> position of pyrazole of generic structure

### Structure-14

WO2003087062

G= above pyrazole

R<sub>3</sub>= alkyl matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of generic structure

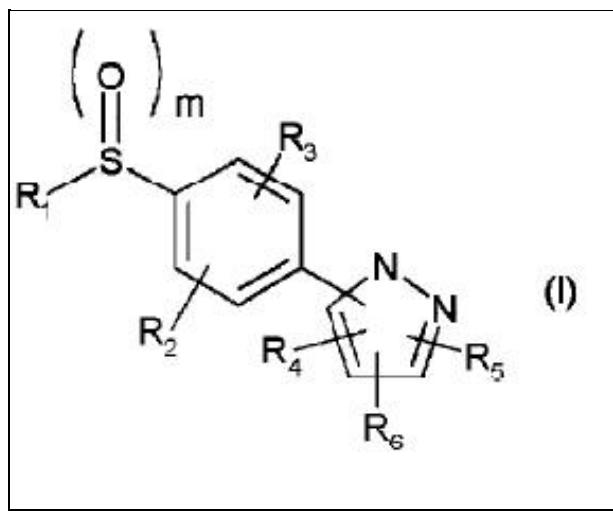

R<sub>4</sub>= halo matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of generic structure

R<sub>5</sub>= phenyl matches with substituent at 4<sup>th</sup> position (but missing substituents) of pyrazole of generic structures

Above given aryl matches with R<sup>2</sup>(substituted aryl) at 5<sup>th</sup> position of pyrazole of generic structure

## Structure-15

WO200066562

G

R<sub>4</sub>= alkyl matches with R<sup>1</sup>(alkyl) at 1<sup>st</sup> position of pyrazole of generic structure

R<sub>5</sub>= halo matches with R<sup>3</sup>(halogen) at 3<sup>rd</sup> position of pyrazole of generic structure

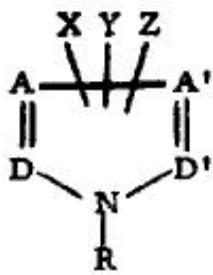

R<sub>6</sub>= optionally substituted aryl matches with substituent at 4<sup>th</sup> position (but missing substituents) of pyrazole of generic structures

Above given aryl matches with R<sup>2</sup>(substituted aryl) at 5<sup>th</sup> position of pyrazole of generic structure

## Relevant structures with substituent variation

### Structure-1

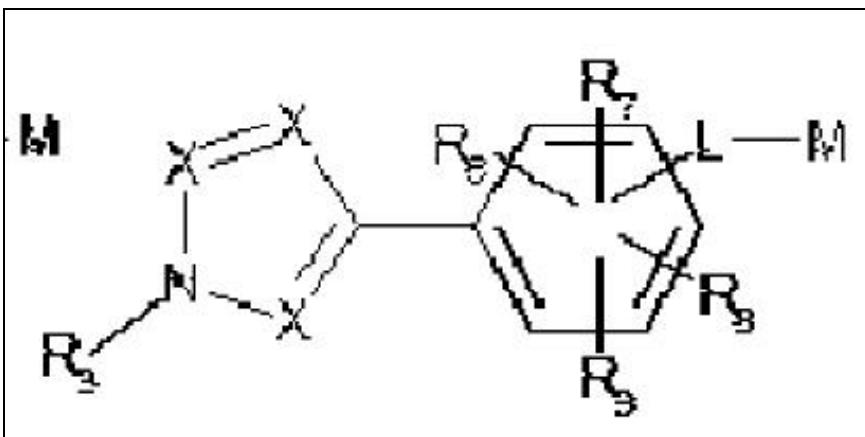

EP0080051

- In the above structure D is N & A,A?,D? are considered as carbons?so it is forming a pyrazole ring.
- In the first position substituent R is 3-iodopropargyl, so it is matching with the substituent R1( first position) of the generic structure.
- X is Cl, so it is matching with the substituent R<sup>3</sup> (third position) of the generic structure.
- Y is 3-chloro-2-nitrophenyl which is matching with the ring of the fourth position of the generic structure but here ???substituent variation??? is there.
- Z is phenyl, so it is matching with the substituent R<sup>2</sup> (fifth position) of the generic structure.

## Structure-2

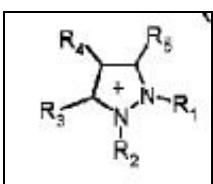

US2005159470

- First position:  $R_3$  is alkyl, so it is matching with the substituent  $R^1$  (first position) of the generic structure.
- Second position: X is N, so it is matching with second position of the generic structure.
- Third position: X is  $CR_5$ ,  $R_5$  is halo so it is matching with the substituent  $R^3$  (third position) of the generic structure.
- Fourth position: In fourth position substituted aryl ring is present???(but it contains five substituents)???, is matching with fourth position of the generic structure.
- Fifth position: X is  $CR_5$ ,  $R_5$  is heteroaryl, so it is matching with substituent  $R^2$  (fifth position) of the generic structure.

## Other structures

WO2007070607

- R1-H,
- R2 is  $\text{^3C}_2\text{H}_5$  which matches with R1(alkyl) at 1st position of the generic structure
- R5 is halo which matches with R3(halogen) at 3rd position of pyrazole of the generic compound
- R4 is heteroaryl substituted by  $\text{C}_2\text{H}_5$ (one substituent is missing) matches with substituent at 4th position of the generic structure.
- R3 is substituted heteroaryl which is matching with the substituent R2(fifth position) of the generic structure
