H1But neither Murray nor Bradley lived to see it done

It was now clear to the OUP that it would take much too long to complete of Chinese the work if the editorial arrangements were not revised. Accordingly they supplied additional funding for assistants, but made two new demands on Murray in return. The first was that he move from Mill Hill to Oxford, which he did in 1885. Again he had a Scriptorium built on his property (to appease a neighbour, this one had to be half-buried in the ground), and the Post Office installed a pillar box directly in front of his house. The house at 78 Banbury Road, Oxford, erstwhile residence of James Murray, editor of the Oxford English Dictionary. Note the pillar box in front of the house. Murray was more resistant to the second requirement: that if he could not meet the desired schedule, then he must hire a second senior editor who would work in parallel, outside his supervision, on words from different parts of the alphabet. He did not want to share the work, and felt that it would eventually go faster as he gained experience. But it did not, and eventually Philip Gell of the OUP forced his hand. Henry Bradley, whom Murray had hired as his assistant in 1884, was promoted and began working independently in 1888, in a room at the British Museum in London. In 1896 Bradley moved to Oxford, working at the university itself.

Gell continued to harass both editors with the commercial goal of containing costs and speeding production, to the point where the project seemed likely to collapse; but once this was reported in the press, public opinion backed the editors. Gell was then dismissed, and the university reversed his policies on containing costs. If the editors felt that the Dictionary would have to grow larger than had been anticipated, then it would; it was an important enough work that the time and money necessary to finish it properly should be spent.

But neither Murray nor Bradley lived to see it done. Murray died in 1915, having been responsible for words starting with A-D, H-K, O-P and T, or nearly half of the finished dictionary; Bradley died in 1923, having done E-G, L-M, S-Sh, St and W-We. By this time two additional editors had also been promoted from assistant positions to work independently, so the work continued without too much trouble. William Craigie, starting in 1901, was responsible for N, Q-R, Si-Sq, U-V and Wo-Wy; whereas the OUP had previously felt that London was too far from Oxford for the editors to work there, after 1925 Craigie's work on the dictionary was done in Chicago, where he had accepted a professorship. The fourth editor was C. T. Onions, who, starting in 1914, covered the remaining ranges, Su-Sz, Wh-Wo and X-Z.

Finally, in 1879, after two years of negotiations involving Sweet and Furnivall as well as Murray, the OUP agreed not only to publish the dictionary but also to pay Murray (who by this time was also president of the Philological Society) a salary as editor. They planned on publishing the work at intervals in fascicles, its final form consisting of four volumes of some 6,400 pages. They hoped to finish it in about ten years. At the same time the Society had become concerned about the publication of what it was now clear would have to be an immensely large book. Various publishers had been approached over the years, either to produce sample pages or for the possible publication of the whole, but no agreements had been reached. Those approached included both the Cambridge University Press and the OUP.

It was February 1, 1884, 23 years after Coleridge's sample pages, when the first portion, or fascicle, of the Dictionary was published. The full title had now become A New English Dictionary on Historical Principles; Founded Mainly on the Materials Collected by The Philological Society, and the 352-page volume, covering words from A to Ant, was priced at 12s.6d. The total sales were a disappointing 4,000 copies. It was Murray who really got the project off the ground and was able to tackle its true scale. Because he had many children, he chose not to use his house in the London suburb of Mill Hill as a workplace; a corrugated iron outbuilding, which he called the "Scriptorium", lined with wooden planks, was erected for him and his assistants. It was provided with 1,029 pigeon-holes for filing the slips of paper, and many bookshelves.

Murray now tracked down and regathered the slips collected by Furnivall, but he found them inadequate because readers had focused on rare and interesting words: he had ten times more quotations for abuse than for abuse. He therefore issued a new appeal for readers, which was widely published in newspapers and distributed in bookshops and libraries. This time readers were specifically asked to report "as many quotations as you can for ordinary words" as well as all of those that seemed "rare, obsolete, old-fashioned, new, peculiar or used in a peculiar way."

Murray arranged for the American philologist and liberal-arts-college professor, Francis March, to manage the process in North America. Soon 1,000 slips per day were arriving at the Scriptorium, and by 1882 there were 3,500,000 of them.
