

Veterinary Vaccines Market Report

The following report studies the Veterinary Vaccines market in detail and analyzes the market information to come up with Future trends and Attractive segments in this market.

The following is a snapshot of the complete report:

- The **Global Veterinary Vaccines market (\$4.23 Bn)** accounted for around 20% of the total Vaccines market (\$29.71 Bn) in 2010. It is expected to grow with a **CAGR of 5.80%** to reach the market size of **\$5.6 Bn by 2015**.
- **United States** represents the largest market for Veterinary vaccines worldwide, with the market share of 46% and market size of \$1.94 Bn in 2010.
- **Porcine vaccines** is the **largest sub-segment** in the Veterinary Vaccines market which is forecasted to grow to \$1.32 Bn market by 2015 whereas **Canine Vaccines** is the **fastest growing segment** among all the sub-segments with the growth rate of 5.81%.
- The **top 3 players** in the Veterinary Vaccines market are **Pfizer, Merck and Sanofi-Aventis**, based on the revenues they generated in the Animal Health Segment in 2010.
- The report contains the company profile of 8 major players in this segment, with focus on their Veterinary Vaccines market activities only.
- There have been **11 Mergers/Acquisitions** in the Veterinary Vaccines market in the last two years (2009-2011), with Pfizer acquiring Wyeth being the largest acquisition based on the deal size and the value add, it brought to Pfizer in the Veterinary Vaccines market and its portfolio. This acquisition has been analyzed in the market report.

Based on the market analysis, R&D trends, future focus areas of the key players and transactional activities in this segment, we conclude the following trends in the Veterinary Vaccines market:

1. **Companion Veterinary Vaccines** are trailing on **high growth track**
 - ◆ Livestock Vaccines market is more developed than Companion Vaccines market right now, but the later is catching up very quickly with more number of clinical trials in the Companion Vaccines area
 - ◆ In companion vaccines, **canine vaccines** is forecasted to grow at the highest pace and is **expected to be the leading segment** in the Veterinary Vaccines market
2. **Two major segments in focus:**
 - ◆ Canine
 - ◆ Porcine
3. **Two major areas of focus** in the Veterinary vaccines market are:
 - ◆ Parasiticides
 - ◆ Infectious disease vaccines (Bacteria and Virus Vaccines)

Introduction

Vaccination protects hundreds of millions of animals worldwide from disease and possibly death. Animals, just like humans, suffer from a range of infectious diseases. As veterinary medicine has advanced, prevention of disease has become a priority as healthy food comes from healthy animals. One of the best means of preventing disease is by creating immunity in the animal. This is usually achieved by vaccination.

Not all animals need every vaccine. Some, like clostridial disease prevention, are basically routine, just like childhood vaccination programmes. The vaccination programme chosen for farm animals depends on the management system, the location of the farm and the history of the herd or flock (and whether or not a disease is likely to be encountered). Most farm animals are young, and these animals (just like children) are often more susceptible to infection. So, for example, calves often need to be protected by vaccination against respiratory disease. Some of the diseases that can be prevented are shown below.

Species Diseases Controlled by Vaccines

1. **Cattle** - Blackleg, tetanus, ?husk? (lungworm disease), rotavirus, infectious bovine rhinotracheitis (IBR), respiratory syncytial virus, pasteurellosis, enteritis, leptospirosis, mastitis, ringworm, BVD, PI3, coronavirus, salmonella, E Coli.
2. **Sheep & goats** - Clostridial diseases (8 different species including tetanus), pasteurellosis, ovine abortion (chlamydiosis and toxoplasmosis), louping ill, contagious pustular dermatitis (orf), footrot
3. **Pigs** - Erysipelas, parvovirus, colibacillosis, clostridial disease, atrophic rhinitis, enteritis, porcine pneumonia, PRRS

4. **Poultry** - Avian coccidiosis, avian encephalomyelitis, avian infectious bronchitis, avian infectious bursal disease, avian reovirus, chicken anaemia virus, duck virus enteritis, egg drop syndrome 1976, erysipelas, infectious laryngotracheitis, Marek's disease, Newcastle disease, pasteurellosis, post-natal colibacillosis, salmonellosis, swollen head syndrome, turkey haemorrhagic enteritis, turkey rhinotracheitis
5. **Fish** - Enteric redmouth disease, furunculosis, vibriosis (vibrio anguillarum, vibrio salmonicida and Vibrio viscosus (now named moratella viscosus))
6. **Dogs** - Distemper, infectious canine hepatitis, leptospirosis, parvovirus, kennel cough (Bordetella bronchiseptica and canine parainfluenza virus). Also rabies for dogs going abroad as part of the PETS scheme.
7. **Cats** - Feline infectious enteritis (or panleucopenia), feline leukaemia, chlamydia, cat flu? (feline herpes virus and feline calicivirus). Also rabies for cats going abroad as part of the PETS scheme.
8. **Horses** - Equine herpes virus 1, influenza, tetanus, viral arteritis. Also rabies (not routinely used in the UK)
9. **Rabbits** - Myxomatosis, viral haemorrhagic disease
10. **Pigeons** - Paramyxovirus, pigeon pox

Market Overview

The global pharmaceutical industry was \$825Bn in 2010, out of which the total Vaccines market accounted for only 3.6% (\$29.71 Bn). The vaccines market is classified in two segments: Human Vaccines and Veterinary Vaccines market. The human vaccines market accounts for more than 80% of the total vaccines market, whereas the Veterinary vaccines market accounts for around 20% of the total vaccines market. The focus of this report will be on Veterinary vaccines.

Market Size of Vaccines

- The global sales of human and animal vaccines were \$22.5 Bn in 2008. In 2010, it has reached approximately \$29.71 Bn. The global vaccines market grew at a compound annual growth rate (CAGR) of 14.91% in 2008-2010.
- The global market for human vaccines in 2008 was \$18.7 Bn and, with a continuing increase in the global market, reached \$25.48 Bn in 2010.
- The Veterinary vaccines market grew from approximately \$3.8 Bn in 2008 to about \$4.23 Bn in 2010, an increase of about 5.51%.

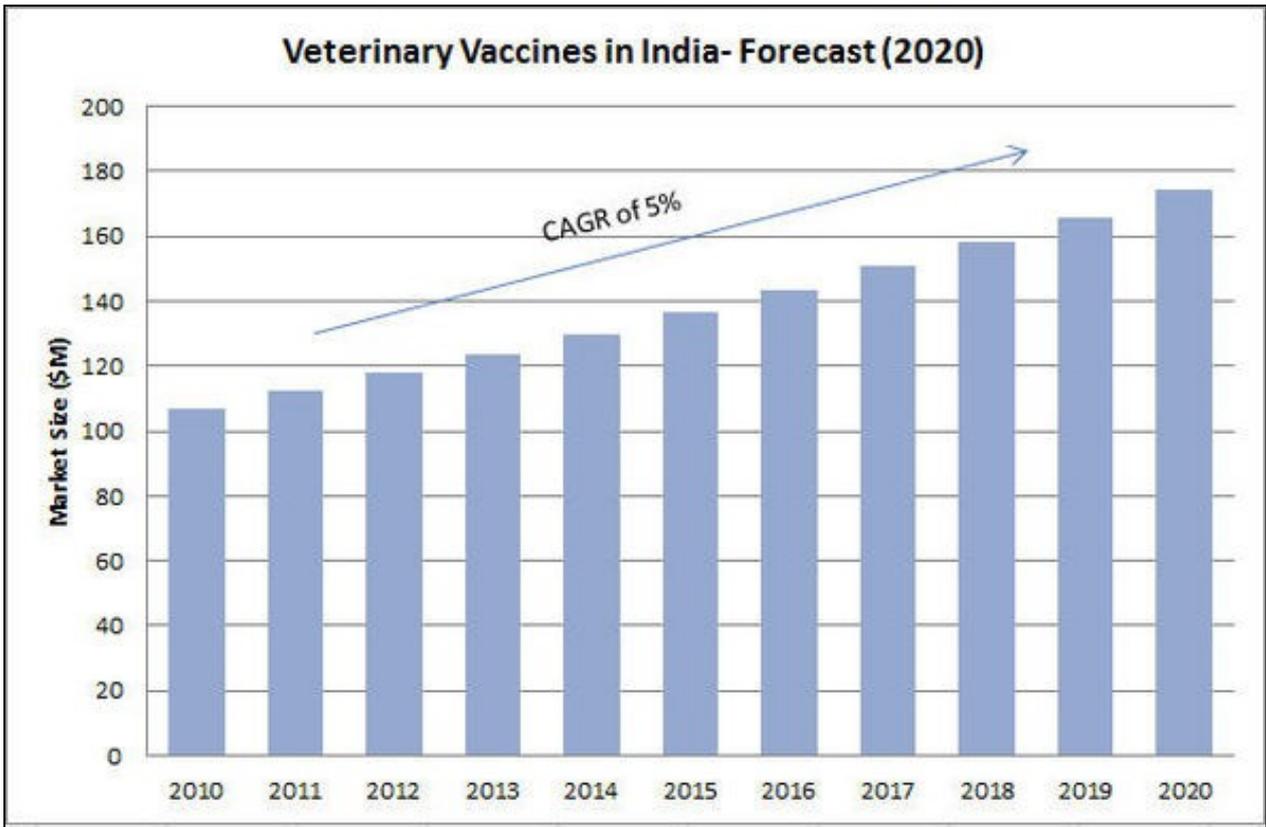

Source: Dolcera Analysis

Indian Veterinary Vaccines Market

- The Indian veterinary vaccine market has reached \$107M in 2011 and is forecast to reach \$174M by 2020 with a CAGR of 5%.
- The animal vaccines include poultry vaccines, cattle and sheep vaccines.
- The main players in this sector include
 - ◆ Indian Immunologicals
 - ◆ Indovax
 - ◆ Intervet acquired by Merck
 - ◆ Biovet
 - ◆ Hester Biosciences
 - ◆ Brilliant Bio Pharma
 - ◆ MSD Animal Health (Merck) and
 - ◆ The Institute of Animal Health and Veterinary Biologicals

Market Forecast for Vaccines

- Veterinary Vaccines market is expected to increase at a 5.7% CAGR between 2010 and 2015 to reach \$5.6 billion in 2015, driven by a growing number of diseases in animals, technological breakthroughs in biotechnology and growing awareness of animal disease
- Human Vaccines market is expected to grow at a CAGR of 19.6% to reach \$58.6 billion by the end of 2015.

Geographical Segmentation of Veterinary Vaccines Market

- United States represents the largest market for Veterinary vaccines worldwide, with the market share of 46% and market size of \$1.94 Bn in 2010. The growth in the US Veterinary market will slow down in future due to safety concerns, higher market maturity and fewer prospects for mass production and development of new products.
- Europe comes second, with the market share of 33% and the market size of \$1.4 Bn in 2010. The European market is mainly driven by the growing demand for livestock. 40% of the revenues in Europe come from France, Germany and United Kingdom, which amounts to \$560 Mn

Market Segments of Veterinary Vaccines

Veterinary Vaccines market is divided into 2 major segments:

- (i) Livestock Vaccines
- (ii) Companion Vaccines

- **Livestock Vaccines:** Mainly consists of Farm animals like Cattle, pigs, sheep, poultry, aquaculture and bees
- **Companion Animals:** Mainly consist of Dogs, cats and horses

Source: Dolcera Analysis

• Livestock Vaccines Market:

- ◆ Among the two segments analyzed, Livestock Vaccines accounts for the larger share of about 59% in 2010.
- ◆ Porcine vaccines are the largest sub-segment within Livestock Vaccines.
- ◆ The revenues from Porcine Vaccines market have touched \$1 Bn in 2010.

• Companion Vaccines Market:

- ◆ Companion Vaccines account for 41% of the Veterinary Vaccines market in 2010.
- ◆ Companion Vaccines market is sub-divided into 3 segments, namely, Canine, Feline and Equine.
- ◆ Among these segments, Canine and Feline segments are large and account for 95% of the sales in Companion Vaccines.
- ◆ Equine vaccines only accounts for 5% of the sales in this segment.
- ◆ Canine vaccines are the fastest growing segment within Companion vaccines with the growth potential of more than 5% over the period to 2015.

Market Analysis of Veterinary Vaccines

The following chart shows the percentage breakup of all the 5 segments in the Veterinary Vaccines market. It also shows the market forecast for each of the segments for the years 2010 - 2015. Please click on the required segment in the pie-chart to get the market forecast for that segment in the bar chart.

Please click on the segments in the pie-chart to get the corresponding segment forecast for 2010-2015

Major Players in the Veterinary Vaccines Market

This section lists the top players in the Animal Health Segment based on the revenue generated in 2010. It then analyzes the performance of these players in the veterinary vaccines market by looking at the breakup of the revenues generated by them in the vaccines market, current product portfolio in veterinary vaccines, their R&D focus areas in this segment, veterinary vaccines under clinical trial and the benefits from mergers and acquisitions in this market.

Key Players - on Revenue basis

Major Players in the Veterinary Vaccines market have been determined based on the revenues they made from Animal Health Segment in 2010. The following table lists down the top players in this market along with the revenues generated by them in Animal Health Segment in 2010. All the figures are in Billion \$.

Company	Revenues from Animal Health in 2010 (\$ Bn)
Pfizer	3.575
Merck	2.900
Sanofi-Aventis	2.635
Bayer Healthcare	0.800
Virbac	0.781
Novartis	0.500
Boehringer Ingelheim	0.354
Heska Corporation	0.065

					<p>The company will also acquire cattle vaccines in the U.S. and Canada including the Triangle®, Pyramid, and Presponse® vaccine lines. Pharmaceutical products being acquired include Cydectin® (moxidectin) for cattle and sheep as well as Polyflex® (ampicillin sodium).</p> <p>The dairy portfolio includes the key brands Today® and Tomorrow®. Several Canadian swine vaccines are included in the acquisition as are some cattle vaccines sold in Europe and South Africa.</p> <p>It will build more capabilities in the core vaccine segment and expand Boehringer Ingelheim's already strong product lines</p>			
10	17-Sep-09	Sanofi-Aventis	Merial Ltd (50% stake from Merck)	USA	<p>Merial makes pet medicines like flea-and-tick blocker, Frontline and chewable heartworm preventer Heartgard, plus Ivomec, a parasite killer in cattle.</p>	100	4,000	Merck Press Release
11	7-Jun-09	Pfizer	RFCL-Vetnex Animal Health Unit	India	<p>Vetnex is a market leader in poultry, livestock and pet healthcare and is one of the top three players in the Indian animal healthcare market.</p> <p>Opportunity to enter India market</p>	100	75	Economic Times

Analysis of Pfizer's Acquisition of Wyeth

Date of Acquisition	14-Oct-09
Acquiring Company	Pfizer
Acquired Company	Wyeth
Country	USA
Consideration	\$68 Bn

Post the acquisition, Pfizer Animal Health is now the world's leader in the discovery, development, manufacture and sales of veterinary vaccines and medicines for livestock and companion animals.

Relevance to Pfizer Animal Health Business

Fort Dodge Animal Health is one of the divisions of Wyeth, which is a leader in the manufacturing of prescription and over-the-counter vaccines and pharmaceuticals for veterinary medicine as well as livestock.

Reasons for the acquisition

1. Diversified its U.S. portfolio

The following products have been added to Pfizer Animal Health portfolio post acquisition:

- Beef and dairy animal health portfolio - FACTREL®, SYNOVEX®
- Swine market portfolio - SUVAXYN®, SUVAXYN PCV-2
- Poultry Health Portfolio - POULVAC®, MATERNAVAC® IBD-Reo
- Equine health portfolio - WEST NILE INNOVATOR®, FLU VAC INNOVATOR®, QUEST®, QUEST PLUS®
- Canine portfolio - LYMEVAX®

2. Foray into new business areas

- Wyeth has expanded Pfizer's presence in animal health
- Augments in-line and pipeline portfolio in "invest to win" disease areas
- Enhances the scientific, manufacturing and pharmaceutical science capabilities of Pfizer
- Provides the best opportunities for world class, high performing talent in the industry

3. Strengthens Platforms for Improved, Consistent and Stable Earnings Growth

- Pfizer's CAGR before acquisition (2008-13) = -5.3%
- Wyeth's CAGR before acquisition (2008-13) = 4.3%
- Combined Pfizer-Wyeth CAGR (2008-13) = 0.9%
- Wyeth contributes a large revenue increment to Pfizer

4. Addresses Revenue Loss from Lipitor patent expiry

- Lipitor accounted for over 28% of Pfizer's sales in 2008
- Lipitor was going to lose US patent exclusivity in 2011, leading to significant revenue losses
- This acquisition makes up for the revenue loss from the exclusivity of Lipitor

Legal Issues due to the acquisition

The complaint charges that the proposed transaction likely would harm competition in each of the relevant markets by reducing the number of suppliers and leaving veterinarians and other animal health product customers with limited options. Without the competition provided by Pfizer and Wyeth in these markets, customers are more likely to see prices rise, according to the complaint. The complaint further alleges that the entry of new competitors in these markets would not be timely, likely, nor sufficient to offset the loss of competition, and that the transaction would increase the likelihood that Pfizer could act on its own or with other companies to raise prices.

Divestiture of certain Animal Health Assets of Wyeth to Boehringer Ingelheim

Pfizer divested some of the Fort Dodge Animal Health products it acquired from Wyeth, within 10 days from the acquisition, to Boehringer Ingelheim to settle the anticompetitive effects the Federal Trade Commission believes are likely to result from the transaction in numerous markets for animal health products.

Due to this transaction, the Federal Trade Commission approved that it would not harm consumers in any prescription drug market where the companies currently overlap, reduce incentives to innovate, create intellectual property barriers, or allow Pfizer to engage in anticompetitive marketing.

Emerging Trends in Veterinary Vaccines

1. Companion Veterinary Vaccines are trailing on high growth track
 - ◆ Livestock Vaccines market is more developed than Companion Vaccines market right now, but the latter is catching up very quickly with more number of clinical trials in the Companion Vaccines area
 - ◆ In companion vaccines, canine vaccines is forecasted to grow at the highest pace and is expected to be the leading segment in the Veterinary Vaccines market
2. Two major segments in focus:
 - ◆ Canine
 - ◆ Porcine
3. Two major areas of focus in the Veterinary vaccines market are:
 - ◆ Parasiticides
 - ◆ Infectious disease vaccines (Bacteria and Virus Vaccines)
