Control patents

1	US20040117007A1	06/17/2004	STS Biopolymers	Medicated stent having multi-layer polymer coating
2	US6468649B1	10/22/2002	Scimed Life Systems	Antimicrobial adhesion surface
3	US20030153983A1	08/14/2003	Scimed Life Systems	Implantable or insertable medical device resistant to microbial growth and biofilm formation
4	US20090187254A1	07/23/2009	Boston Scientific Scimed	Urological medical devices for release of urologically beneficial agents
5	US20090171465A1	07/02/2009	Boston Scientific Scimed	Polymeric Regions For Implantable Or Insertable Medical Devices
6	US20080097349A1	04/24/2008	Boston Scientific Scimed	Partially soluble implantable or insertable medical devices
7	US5554147A	09/10/1996	САрНСО	Compositions and devices for controlled release of active ingredients

Patent Classes

1	A61F2/00	IPC	Filters implantable into blood vessels; Prostheses, i.e. artificial substitutes or replacements for parts of the body; Appliances for connecting them with the body; Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. Stents					
2	A61F2/01D	ECLA	Filters implantable into blood vessels; Prostheses, i.e. artificial substitutes or replacements for parts of the body; Appliances for connecting them with the body-Filters implantable into blood vessels -Distal protection devices, i.e. devices placed distally in combination with another endovascular procedure, e.g. angioplasty or stending					
3	A61F2/04	IPC	Filters implantable into blood vessels; Prostheses, i.e. artificial substitutes or replacements for parts of the body; Appliances for connecting them with the body; Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. Stents -Prostheses implantable into the body-Hollow or tubular parts of organs, e.g. bladders, tracheae, bronchi, bile ducts (A61F 2/18, A61F 2/20 take precedence; devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. Stents					
4	A61F2/06	IPC	Filters implantable into blood vessels; Prostheses, i.e. artificial substitutes or replacements for parts of the body; Appliances for connecting them with the body; Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. Stents -Prostheses implantable into the body-Hollow or tubular parts of organs, e.g. bladders, tracheae, bronchi, bile ducts (A61F 2/18, A61F 2/20 take precedence; devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. Stents-Blood vessels					
5	A61F2/06P	ECLA	Filters implantable into blood vessels; Prostheses, i.e. artificial substitutes or replacements for parts of the body; Appliances for connecting them with the body; Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. Stents -Prostheses implantable into the body-Hollow or tubular parts of organs, e.g. bladders, tracheae, bronchi, bile ducts (A61F 2/18, A61F 2/20 take precedence; devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. Stents-Blood vessels -Stent-graft or graft for the treatment of aneurysms (instruments for placement or removal; external stent or sleeve around aneurysm					
6	A61F2/82	IPC	Filters implantable into blood vessels; Prostheses, i.e. artificial substitutes or replacements for parts of the body; Appliances for connecting them with the body; Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. Stents -Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. stents					
7	A61F2/84	IPC	Filters implantable into blood vessels; Prostheses, i.e. artificial substitutes or replacements for parts of the body; Appliances for connecting them with the body; Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. Stents -Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. stents -Instruments specially adapted for their placement or removal					
8	A61F2/86	IPC	Filters implantable into blood vessels; Prostheses, i.e. artificial substitutes or replacements for parts of the body; Appliances for connecting them with the body; Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. Stents -Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. stents-Stents formed from wire-like elements					
9	A61F2/88	IPC						

			Filters implantable into blood vessels; Prostheses, i.e. artificial substitutes or replacements for parts of the body; Appliances for connecting them with the body; Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. Stents -Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. stents-Stents formed from wire-like elements-formed as helical or spiral coils.				
10	A61F2/90	IPC	Filters implantable into blood vessels; Prostheses, i.e. artificial substitutes or replacements for parts of the body; Appliances for connecting them with the body; Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. Stents -Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. stents-Stents formed from wire-like elements-the wire-like elements forming a net structure.				
11	A61F2/92	IPC	Filters implantable into blood vessels; Prostheses, i.e. artificial substitutes or replacements for parts of the body; Appliances for connecting them with the body; Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. Stents -Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. stents-Stents in the form of a rolled-up sheet expanding after insertion into the vessel.				
12	A61F2/94	IPC	Filters implantable into blood vessels; Prostheses, i.e. artificial substitutes or replacements for parts of the body; Appliances for connecting them with the body; Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. Stents -Devices providing patency to, or preventing collapsing of, tubular structures of the body, e.g. stents-Stents retaining their form after locating in the predetermined place.				
13	A61M29/00	IPC	Devices for introducing media into, or onto, the body-Dilators with or without means for introducing media, e.g. remedies				
14	623/1.1	USPC	Prosthesis (i.e., artificial body members), parts thereof, or aids and accessories therefor-Arterial prosthesis (i.e., blood vessel)				
15	623/1.11	USPC	Prosthesis (i.e., artificial body members), parts thereof, or aids and accessories therefor-Arterial prosthesis (i.e., blood vessel) -Stent combined with surgical delivery system (e.g., surgical tools, delivery sheath, etc.)				
16	623/1.12	USPC	Prosthesis (i.e., artificial body members), parts thereof, or aids and accessories therefor-Arterial prosthesis (i.e., blood vessel) -Stent combined with surgical delivery system (e.g., surgical tools, delivery sheath, etc.) -Expandable stent with constraining means				
17	623/1.13	USPC	Prosthesis (i.e., artificial body members), parts thereof, or aids and accessories therefor-Arterial prosthesis (i.e., blood vessel) -Stent in combination with graft				
18	623/1.14	USPC	Prosthesis (i.e., artificial body members), parts thereof, or aids and accessories therefor-Arterial prosthesis (i.e., blood vessel) -Stent in combination with graft -Stent in combination with graft-Stent penetrating natural blood vessel				
19	623/1.15	USPC	Prosthesis (i.e., artificial body members), parts thereof, or aids and accessories therefor-Arterial prosthesis (i.e., blood vessel) -Stent structure				
20	623/1.2	USPC	Prosthesis (i.e., artificial body members), parts thereof, or aids and accessories therefor-Arterial prosthesis (i.e., blood vessel) -Stent structure -Self-expanding stent				
21	623/11.11	USPC	Prosthesis (i.e., artificial body members), parts thereof, or aids and accessories therefor-Implantable Prosthesis				
22	623/23.64	USPC	Prosthesis (i.e., artificial body members), parts thereof, or aids and accessories therefor-Implantable Prosthesis-Hollow tubular part or organ (e.g., bladder, urethra, bronchi, bile duct, etc.)				
23	623/1.49	USPC	Prosthesis (i.e., artificial body members), parts thereof, or aids and accessories therefor-Arterial prosthesis (i.e., blood vessel) -Made of synthetic material				
24	623/1.42	USPC	Prosthesis (i.e., artificial body members), parts thereof, or aids and accessories therefor-Arterial prosthesis (i.e., blood vessel) -Drug delivery				
25	606/191	USPC	Surgery-Instruments-Internal pressure applicator (e.g., dilator)				
26	606/200	USPC	Surgery-Instruments-Internal pressure applicator (e.g., dilator) -With emboli trap or filter				
27	606/194	USPC	Surgery-Instruments-Internal pressure applicator (e.g., dilator) -Inflatable or expandable by fluid-Inserted in vascular system				
28	606/195	USPC	Surgery-Instruments-Internal pressure applicator (e.g., dilator) -Inflatable or expandable by fluid-Inserted in vascular system -Detachable from inflation means				
29	606/108	USPC	Surgery-Instruments-Means for inserting or removing conduit within body

Dolcera Patent Analysis

					1	
					Problem	Solution
1	US20090187254A1	07/23/2009	BOSTON SCIENTIFIC SCIMED, INC.	UROLOGICAL MEDICAL DEVICES FOR RELEASE OF UROLOGICALLY BENEFICIAL AGENTS	In previous attempts to develope a uerteral stent, encrustation was the problem associated with the stent. Along with this pain and discomfort by stent implantaion was there.	This invention provides a ueteral stent which release one or more urologically beneficial agents in effective amounts to reduce the problem of encrustation and pain related to stent.
2	US20090171465A1	07/02/2009	Boston Scientific Scimed, Inc.	Polymeric Regions For Implantable Or Insertable Medical Devices	In previous attempts to develope a uerteral stent, encrustation was the problem associated with the stent. Along with this pain and discomfort by stent implantaion was there.	This invention provides a ureteral stent with a coating of a material(EVA) that reduces the discomfort caused by the stent during implantation.
3	US20080097349A1	04/24/2008	Boston Scientific Scimed, Inc.	Partially soluble implantable or insertable medical devices	In previous attempts to develope a uerteral stent, encrustation was the problem associated with the stent. Along with this pain and discomfort by stent implantaion was there.	Here the device (Stent) is provided with at least one surface that contains one or more depressions, which are at least partially filled with a soluble material. This makes stent more flexible and soft after implantation hence minimizing pain and discomfort after implantation or insertion.
4	US5554147A	09/10/1996	CApHCO, Inc.	Compositions and devices for	During implantation of ureteral stent,pain and	In this invention stent is povided with a pH sensitive coating that

				controlled release of active ingredients	discomfort are the problem with previous stents. Also microbial or bacterial infection at the site of implantation was the problem.	includes antimicrobial agent to stop the infection. This coating also has the hydrogel property which Upon swelling, the hydrogel's coefficient of friction is reduced, and the polymer becomes slippery, this mechanism reduces the discomfort.
5	US6468649B1	10/22/2002	Scimed Life Systems, Inc.	Antimicrobial adhesion surface	In prior art problem was the lack of the device which can remain in vivo for extended periods of time without losing its antimicrobial efficacy and which can provides protection against bacterial and fungal organisms for extended periods of time without leaching substances into a patient.	This invention provides a medical device with a hydrophobic coating that inhibits the growth of microbes for extended period of time.
6	US20030153983A1	08/14/2003	Scimed Life Systems, Inc.	Implantable or insertable medical device resistant to microbial growth and biofilm formation	In previous attempts to develope a ureteral stent with coating the problem was the formation of biofilm and microbial growth.	The device of the present invention, therefore, overcomes the disadvantages associated with the use of coatings as discussed above, and provides a reduced risk of biofilm fouling that eventually results in encrustation, occlusion and failure of the device. In this invention medical device comprises at least one biocompatible matrix polymer region and bioactive agents comprising an antimicrobial agent and a microbial attachment/biofilm synthesis inhibitor.
7	US20030139800A1	07/24/2003	None	Stent assembly with therapeutic agent exterior banding	In earlier attempts for stent with a therapeutic property, the problem was the coating or the sheath (responsible for therapy) may covers side branch arteries, vessels, or other lumens extending from the main lumen in which the stent is installed. The sheath can reduce blood flow to or from the side branch and deliver medication into the side branch where it is unnecessary.	This invention provides a stent assembly with exterior banding for delivery of therapeutic agents that would overcome the previous disadvantages. Also this stent assembly which avoids side branch vessel blockage by a sheath, with increased drug storage capacity and allowing delivery of different drugs at different axial and radial locations.
8	US20040117007A1	06/17/2004	STS Biopolymers, Inc.	Medicated stent having multi-layer polymer coating	The problem associated with previous stent and their implantation was thrombus formation in vicinity of stent.	The stent assembly developed in this invention consistently provide therapeutic activity from the surfaces of stents in order to reduce the incidence of restenosis and thrombus formation after coronary stenting procedures in the clinic.
9	WO1990013332A1	11/15/1990	CEDARS-SINAI MEDICAL CENTER	STENT WITH SUSTAINED DRUG DELIVERY	Problem was to provide an intravascular stent that preserves vessel patency, inhibits luminal narrowing and at the same time stent can deliver a pharmaceutical agent to a specific body site or organ.	The stent assembly provided by this invention will release anticoagulants, antiplatelet drugs or drugs that inhibit excessive endothelial cell growth at the placement site, thereby preserving the vessels patency and inhibiting luminal narrowing.
10	WO2001036008A2	05/25/2001	STS BIOPOLYMERS, INC.	MEDICAL DEVICES COATED WITH ELASTIC POLYMERIC MATERIAL	The lack of flexibility, expandability and lubricity of coating surface was the problem with previous insertable medical device.	This invention provides a medical device with a polymeric coating adherent to the covering, such that the coating and covering possess desirable surface characteristics such as llubricity, or lack thereof, as well as flexibility, expandability and elasticity.
